

## Commitment to excellence

RES is one of the world's leading independent renewable energy project developers with operations across Europe, the Americas and Asia-Pacific. RES is active in a range of renewable energy technologies including both onshore and offshore wind, solar and energy storage.

At the forefront of renewable energy development for over 30 years, RES has developed and/or built more than 12,000 MW of renewable energy capacity worldwide. In the UK alone we are responsible for approximately 10% of the current wind energy capacity.

From its Glasgow office RES has been developing, constructing and operating wind farms in Scotland since the early 1990s. RES has developed and/or built thirteen wind farms with a total generation capacity of 270 MW.

Drawing on decades of experience in the renewable energy and construction industries, RES has the expertise to develop, construct and operate projects of outstanding quality. We work closely with communities, local authorities and independent experts to ensure our wind farms are built to the highest standards.
