

Transport and access

Access is one of the key considerations when selecting a potential wind farm site.

We will consult with the Roads Department of The Highland Council, the emergency services, the local community and other relevant bodies on our transport plans and a transport assessment will be undertaken as part of the Environmental Impact Assessment process.

If the wind farm is approved, a detailed Traffic Management Plan will be agreed with the roads authority and the police. Wherever reasonable practicable we will use materials available on site and source construction materials locally in order to help reduce traffic movements.

It is likely that turbine components, which would be delivered using special abnormal load vehicles, could be delivered to Scrabster harbour to then make the short journey along the A836 to site.
